

**Amendments to the Specification:**

Please replace paragraph [0038] with the following amended paragraph:

[0038] The embodiment of Figures 7 and 8 is similar to that of Figures 5 and 6 in that the coils 52, 54, and 56 are spiraled in the single plane 50. In this case, however, the thermal bonds are not only formed directly between the coils 52, 54, and 56, but are also individually formed between each coil and a pair of bridges 65 and 67. The bridges 65, 67 in this case are merely pieces of plastic formed of a material common to the tube 14 and laid along a side of the coils 52, 54, and 56. One of thermal bonds 30 can be formed at the junction of each of the coils 52, 54, and 56 with the bridges 65 and 67. A further embodiment of a coil assembly 23 is illustrated in Figures 9 and 10. As shown in Figures 9 and 10, a tube 14 extends from one end 18 to an opposite end 21 to form stacked coils 70, 72, 74, each with an associated plane 76, 78, 81, respectively.
